

Certain e-fillable, protected PDF Forms may present issues when attempting to open them from within a browser. Though settings may be adjusted to permit automatic opening within the browser, this is typically beyond the scope of the average user.

To open e-fillable PDF forms easily, follow these steps to ensure you are opening with PDF software and NOT with an internet browser.

***If you do not have PDF software, [download a free version here](#) BEFORE you begin these steps:**

1. Hover over the form link and **RIGHT CLICK**

2. Select **Save As** or Save Link As
3. **Save to your desktop** or computer files
4. **Open your PDF software and then open the file** (you may also right click the document from within your files or desktop and choose Open With and select your PDF software to ensure it opens with your PDF software and not with your internet browser)

Certain e-fillable forms will not open within an internet browser - Following the instructions above will allow you to open an e-fillable version of the form.

If you prefer, please return to the menu and select the printable version which will open in the browser but must be printed and filled in manually.
